Crunch

Hey BASIC programcıları işte size göre bir program daha. Bu kullanışlı program sayesinde yaptığınız programlar daha az yer kaplayacak. Programın açıklamasına gelince;

-F1- Bu tuş sayesinde boşluklardan arınmış ve tam 255 byte uzunluğunda bir programınız olur. Bu seçenekle Cruncher yazdığınız programın bazı satırlarını birleştirerek ve satır numarası vererek hafızadaki yerine yolluyor. İşin ilginci LIST dendiğinde yer program satırı tam 4 satır sürmesine rağmen yazdığınız program eksiksiz çalışıyor.

-F3-'e basarsanız 255 byte yerine 8' byte'lik satırlara sahip bir programınız olur.

-F5- tuşuna basınca sadece programınızın boşlukları siliniyor.

Yaptığım bir denemede 33 blokluk bir programı 28 bloka indirdi. F1 veya F3'ü seçtiğinizde her şeye rağmen değişen program sorunsuzca kaydedilip yüklenebiliyor. Size bu programı bir an önce yazmanızı öneriyorum. Programın başlangıç ve çalışma süresi 49152'dir. Bu yüzden BASIC hafıza alanını işgal etmeyip yazdığınız programa herhangi bir zarar veremez. Bol şanslar!

Data Yapıcı

Bu program hafızanın herhangi bir yerinde bulunan makine dili bilgileri data satırları halindeki BASIC programa çevirir. Hangi hafıza bölgesi üzerinde işlem yapacağınızı belirtmek için 10. satırdaki BA (başlangıç) değişkeninin değerini hafızanın başlangıcı, BI (bitiş) değişkenini de datası hazırlanacak hafızanın bitiş adresi olarak vermeniz gerekir. SA (satır) değişkeni ise data satırlarının kaç numaralı satırdan başlanarak hazırlanacağını belirtir. Bu değişken 360'dan büyük olmak zorundadır, çünkü kendi programımız 360. satıra kadar sürmektedir.
